Sequence 1, Application US/08916421B
Patent No. 6503729
GENERAL INFORMATION:
APPLICANT: Bult et al.
TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanocorpation of 6503729
TITLE OF INVENTION: jannaschii
FILE REFERENCE: PB275
CURRENT APPLICATION NUMBER: US/08/916,421B
CURRENT PILING DATE: 1997-08-22
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR FILING DATE: 1996-09-22
NUMBER OF SEQ ID NOS: 3
SOFTWARE: PatentIn version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         b

Sequence 16094, Application US/09949016
; Sequence 16094, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
    APPLICANTY VENTER, J. Craig et al.
    TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
    TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
    TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES
    TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES
    TORRENT FILING DATE: 2000-04-14

ON Sep 19, 2002 this sequence version replaced gi:21953804.

ON Sep 19, 2002 this sequence eversion replaced gi:21953804.

ON Sep 19, 2002 this sequence compared assembled using Atlas and whole genome shortun sequencing reads assembled using Atlas and whole genome table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contigs scaffold'). Within each contig-scaffold, assembly (a 'contigs are ordered and oriented, and separated individual sequence contigs are contest and there may be sequence by sized gaps filled with Ns to the estimated size. The sequence contigs within a contigs scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence enly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length NOTE: Estimated insert size may differ from sequence length (see http://www.ngsc.bcm.tmc.edu/docs/Genbank draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (18-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention has cytostatic, and antiarteriosclerotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A

presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chloropheny])(1-methyl-1H-imidazol-5-yl)methyl-4(3-chlorophenyl)-1-methyl-2(-(H)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient will respond. This sequence corresponds to a gene whose expression may be

            histocompatibility class I (MHC-1) and MHC-II antigens and which has been modified to comprise and express a gene encoding an immunomodulator and a gene encoding an antigen of Epstein-Barr virus (EBV). The human cell line, compositions and methods are useful for inducing or stimulating an immune response in a human to an EBV-associated cancer, where the human has or is at risk for Hodgkin's lymphoma, nasopharyngeal carcinoma, gastric carcinoma, Burkit's lymphoma, recall lymphoma, B-cell lymphoma, parotid carcinoma, breast carcinoma, and leiomyosarcoma. The present sequence represents a nucleotide sequence associated with the cell line
                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                  180
